

# Extractive Industries Transparency Initiative (EITI) Reporting

Landfolio software facilitates the provision of data for EITI Reports by government agencies and promotes best practices in EITI Reporting.

## Using Landfolio to Facilitate EITI Reporting

### CHALLENGE

The Extractive Industries Transparency Initiative (EITI) has developed a Global Standard that promotes transparency and improved governance in a country's extractives sector, ensuring local citizens benefit from extractive activities. The EITI Standard, published in 2013 ([www.eiti.org](http://www.eiti.org)), provides detailed guidelines for a country to achieve and maintain EITI Compliance. The EITI Report publishes payments disclosed by companies and revenues received by governments following reconciliation led by an independent Administrator and overseen by a Multi-Stakeholder Group (MSG) composed of members from civil society, corporations, and government.

As a result, government agencies must compile comprehensive, detailed data for EITI reports, including data on revenue streams, commodity reporting, contract disclosures, license ownership, and more. They also need to report by payment type, company and government agency, and project. This can be a timely, inefficient process for government agencies without an advanced system in place.

### SOLUTION

Landfolio® software for natural resource applications provides advanced reporting and data extraction functionality to facilitate the provision of data for EITI reports. The software facilitates concession and tenure reporting, revenue stream reporting, contract and agreement reporting, and disaggregated data.

### BENEFITS

When used to facilitate EITI reporting, Landfolio offers the following benefits to government agencies:

- ▶ Simplifies access to actualized revenue and related data
- ▶ Promotes best practices in EITI reporting
- ▶ Saves on data compilation time and resources
- ▶ Restores public trust
- ▶ Increases sector revenues and stimulates investment
- ▶ Simplifies generation of customized reports for EITI reporting

# About Landfolio

Landfolio software for natural resource applications is the leading workflow management solution that manages and automates key aspects of land and mineral rights management. Private and public organizations globally use Landfolio to manage their land-related business processes, obligations and compliance monitoring. Leveraging the Esri® platform, this enterprise scale software solution provides full localization support and integrates key workflows, electronic approvals and notifications to ensure regulatory compliance and consistent internal processes across an organisation. In 2015, Trimble acquired Spatial Dimension and FlexiCadastré was re-branded as Landfolio software.

## Features

- ▶ Concession and tenure reporting including license holders, license area coordinates, application dates, granting dates, duration of license and commodities
- ▶ Revenue stream reporting including royalties, dividends, bonuses, license fees, rental fees etc
- ▶ Contract and agreement reporting, including beneficial ownership through shareholding functionality, and conditions (obligations)
- ▶ Facilitates the disaggregation of data by payment type, commodity, by company and Government agency (Mining Cadastre), and by project, if required

## Trimble Land Administration Solutions

Trimble's Land Administration solutions automate and integrate land registries, cadastral mapping, and the permitting and licensing of land for governments and businesses worldwide. Through the integration of a broad portfolio of technologies, Trimble provides a fully configurable, scalable solution to help drive the efficient administration of land and its associated transactions, rights, and agreements. With deployments in over 50 countries around the world, Trimble is transforming the way land tenure is secured and land-related assets are managed.
